

Preparation and keeping homes tidy whilst we are carrying out work is essential. there is nothing worse then having your home covered in dust because of the work being undertaken. Here at smith damp proofing we have created our very own clever but brilliant way of doing this. In the area of where the work is being carried we lay carpet or hard wood protection down, then on top of that a layer of 3mm corex is taped to the floor. Then using up right extension poles plastic membrane is tensioned to the ceiling creating a room with in a room. The membrane is taped to the floor and wall inside the area making a sealed room so dust cannot escape. A door is made in the plastic and is kept sealed whilst working inside. Corex and carpet protector is layer throughout the home where the team will be walking. When the work is finished this is then taken down and everywhere is then hoovered and mopped.
